TPE 1000 and TPE 2000

THERAPEUTIC PLASMA EXCHANGE

DISCOVER THERAPEUTIC PLASMA EXCHANGE (TPE) POWERED BY THE **PrisMax** SYSTEM

TPE is a treatment for a number of hematological, neurological, renal and immunological diseases.¹ The American Society for Apheresis (ASFA) guidelines indicate that TPE is effective as first-line or second-line treatment for the following conditions:²

Renal Disorders

- Goodpasture's syndrome

Neurological Disorders

- Guillain-Barré syndrome
- Myasthenia gravis

Hematologic Disorders

- Cryoglobulinemia
- Hyperviscosity in monoclonal gammopathies
- Thrombotic thrombocytopenic purpura (TTP)

The **PrisMax** system with TPE helps meet the demands for multiple critical care therapies

The **PrisMax** system was designed by Baxter to facilitate the delivery of not only TPE but also CRRT and HP. Building upon 20-plus years of critical care expertise, the **PrisMax** system aims to meet evolving needs of the ICU through enhanced simplicity, efficiency and accuracy of treatment delivery.

TPE therapy with the **PrisMax** system

- Designed to offer ease-of-use and simplicity from start to finish
- Provides enhanced safety features for greater confidence
- Designed to simplify workflows and to help drive operational efficiencies

The TPE therapy offering on **PrisMax** device expands your extracorporeal treatment options to large molecule removal and plasma exchange in your Intensive Care Unit*³

Designed to offer ease-of-use and simplicity from start to finish

- Pre-connected sets and intuitive touchscreen interface
- Citrate capabilities and integrated syringe pump for heparin administration
- Scale stability software helps prevent false alarms caused by movement of bags or containers
- Advanced pressure management minimises alarms due to sudden pressure spikes caused by moving the patient

Provides enhanced safety features for greater confidence for the delivery of TPE

- Handheld barcode reader for auto-recognition of sets to limit human error
- Self-regulating pressure system to automatically accommodate blood flow rate adjustments
- Ability to pre-fill the TPE circuit with blood before initiating treatment
- Small increments of flow rate to allow adjustment for lower body weight patients

Designed to simplify workflows and help drive operational efficiencies

- Setting up a TPE procedure on the **PrisMax** System is similar to setting up a CRRT treatment
- Hospitals that own a **PrisMax** System can run TPE therapy without the need for an additional device

Baxter offers two TPE sets for plasma protein removal in adults and children (>9kg)⁴

	TPE 2000 Set	TPE 1000 Set
Minimal Patient Weight	Adult	>9 kg
Effective surface area	0.35m ²	0.15m ²
Blood volume in plasmafilter	41 ml ±10%	22 ml ±10%
Blood volume in set	127 ml ±10%	73 ml ±10%
Minimum blood flow rate	100 ml/min	50 ml/min
Maximum blood flow rate	400 ml/min	180 ml/min
Filter membrane material	Polypropylene	

Plasma Filtration Rate (Q_f) capability and transmembrane pressure (TMP) with increased blood flow rate (Q_b)⁵

Adequate plasma filtration rate can be achieved with small increases in TMP.

Sieving Coefficient (in vivo data – 19 treatments) ⁴	
Albumin	0.97
IgG	1.00
Apolipoprotein B	0.95
IgM	0.92

Values are typical mean values obtained from laboratory testing of post-sterilisation sample lots. Results may vary depending on patient and clinical conditions.
